

BCC Copilot Connector for Domino – Unlock your Domino knowledge for Microsoft 365 Copilot

BCC Copilot Connector for Domino is the native **Microsoft 365 Copilot** integration for **HCL Domino**. No migration, no cloud copies, no compromise on security. It indexes your Domino databases directly into the M365 Copilot Semantic Index, making decades of institutional knowledge, project history, and business data instantly searchable via Copilot.

THE CHALLENGE

Microsoft 365 Copilot is a game changer, but it can only access data within the M365 cloud. Organizations running hybrid Domino environments are left with a powerful AI tool that's missing half the information it needs: your critical business history, enterprise applications, and institutional knowledge all locked inside Domino.

Six Reasons to Connect your Domino Data to M365 Today

Seamless Data Integration Extracts and indexes data from multiple Domino databases, PDF files and Word documents into M365 Copilot's Semantic Index - no migration required. Your data never leaves your servers.	Unified Intelligence Copilot combines Domino data with SharePoint, Teams, Outlook and other M365 sources into one coherent answer - delivering contextual insights no single system could provide alone.	Maintained Security Controls Original Domino access permissions are fully preserved . If a user lacks access to a Domino app, that restriction carries through to M365 Copilot automatically.
Bridge Decades of Knowledge Make 20+ years of institutional knowledge , customer histories, project documentation, Notes-based applications, instantly searchable via Copilot . Open the valuable Domino data to every user, in every language.	Preserve Your Infrastructure Runs as a lightweight add-in task on your existing Domino server. No new hardware, no infrastructure overhaul - just extended capability on what you already own.	Full AI Governance Every Copilot query that touches Domino data is logged, attributable , and auditable , meeting EU AI Act requirements for traceability in enterprise AI systems.

How the BCC Copilot Connector for Domino Works

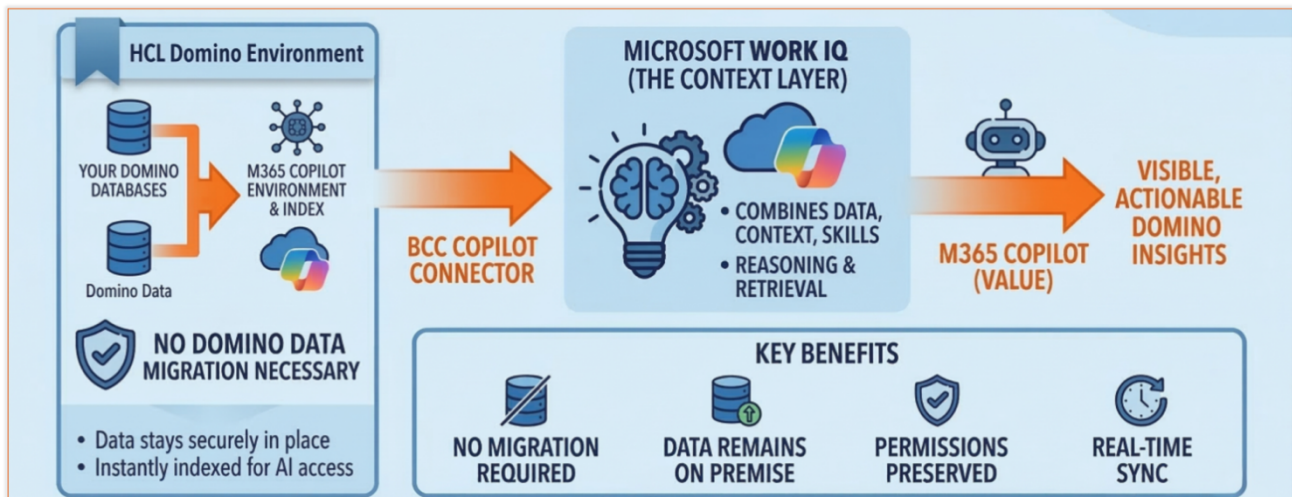

Install on Domino Server	Select Databases	Index to M365	Query in Real-Time
Installed as an add-in task on your existing HCL Domino server — no additional hardware required.	Configure which Domino databases to index. Flexible selection ensures only relevant data is included.	Data is extracted and pushed into the M365 Copilot Semantic Index via the MS Graph Connector API.	When users prompt Copilot, Domino data is queried live — always current, never permanently stored in M365.

Technical Requirements

- | | |
|---|---|
| – HCL Domino Server 9.0.x or later
Hosts the BCC Copilot Connector add-in task with the databases to expose to Copilot. | – Microsoft 365 License
Active M365 environment with Copilot enabled on at least one account. |
| – M365 Graph Connector (Semantic Index)
Each tenant provides for 50 million items to be indexed per tenant included at no extra cost. | – Administrative Access
Required to configure the connector, select databases to index, and manage synchronization schedules. |

One Prompt. Every Answer. Domino Included.

Your most valuable institutional knowledge, contracts, decisions, project history, lives in HCL Domino. Today, Microsoft 365 Copilot cannot see any of it. The BCC Copilot Connector closes that gap without migration and without cloud copies.

Trusted & Certified – Enterprise-grade AI Integration

The BCC Copilot Connector is built and delivered by a certified partner to Microsoft and HCL - under an audited Information Security Management System.

CERTIFIED ISMS ISO/IEC 27001:2022 BCC Software & Services are developed and delivered under a certified Information Security Management System.	MICROSOFT PARTNER Solutions Partner for Modern Work Verified expertise in Microsoft 365, Graph Connectors, and Copilot integration for enterprise customers.	HCL PARTNER HCL Business Partner Deep HCL Domino expertise — from Notes/Domino migration to modern AI-enabled knowledge access.
