

# BCC MigrationEngine

Migration from Microsoft 365 to Google Workspace

## SEAMLESS. SECURE. SCALABLE.

Say goodbye to the limitations of conventional migration tools. BCC has pioneered a breakthrough approach to migrating data from Microsoft 365 to Google Workspace—reimagining what’s possible in secure, cross-platform data transfers.

Backed by the experience of migrating over millions of mailboxes across diverse industries, our cutting-edge solution leaves traditional methods in the dust. We don’t just move data—we preserve its meaning, its structure, and its security. Our solution is the first to offer seamless migration of sensitivity label-secured, encrypted content eg mail and calendar — translating Microsoft’s compliance labels into their Google equivalents with zero loss in data integrity or regulatory compliance. And that’s just the beginning.

All Personal Information Management (PIM) data—emails, calendars, contacts, tasks, notes, and more—is meticulously and securely migrated, including the often-overlooked details that other solutions leave behind. Whether it’s deeply embedded metadata or complex repeating calendar schedules, BCC ensures nothing gets lost in migration.

It’s a bold leap forward in intelligent, complete, and truly secure M365-to-Workspace migration. This isn’t just another migration tool.

### Why BCC MigrationEngine?

#### End-to-End Coverage

Migrate emails, contacts, calendars, tasks, files, and even Microsoft Teams chat — all with one solution.

#### Delta Sync & Incremental Updates

Support for phased rollouts and true delta migrations — migrate only what’s changed.

#### Flexible Deployment

Run in your own data center or use BCC’s based Migration-as-a-Service option.

#### Highly scalable Hub & Spoke Topology

Multiple migration servers enable scalability and performance while avoiding Google throttling. The Hub is the control center, and the spokes conduct the migration work.

#### Concurrent processing:

Multiple spokes can run migrations at the same time, massively improving throughput.

#### Load Distribution:

Workload is spread out, avoiding bottlenecks or overloads on a single machine.

#### Resilience:

If one spoke fails, others continue — minimal disruption.

#### Google API Throttling Mitigation:

Since migration tasks are split across many servers, API limits are less likely to be hit.

#### Scalability:

Easy to scale horizontally by simply adding more spokes for larger environments.

## Advanced Reporting:

- Get detailed migration summaries in **Excel or PDF**
- Tailored to your reporting needs, our high-level migration reports are designed specifically for security and audit departments.
- Customization with CI-compliant design ensures audit-proof internal documentation

## Compliance & Security

- OAuth2-based secure authentication
- Sensitivity labels re-mapped with encryption
- GDPR-compliant with no operator data access

Product Feature	BCC	Competitors
Delta migration of new and changed items	✓	✗
Inbox and all subfolders	✓	✓
Oversized messages converted to EML and saved in Google Drive	✓	✗
Deleted Items Bin	✓	✗
Junk spam mail	✓	✗
Favourites	✓	✗
M365 sensitivity labeled encrypted emails migrated to Workspace classified labels	✓	✗
Read/unread email status observed	✓	✓
Shared mail file to delegated mail	✓	✗
Single events and recurring events	✓	✗
Calendar invites and reminders	✓	✗
Resource calendars migrated to Workspace	✓	✗
Contacts with attachments	✓	✗
Tasks (with Task steps migrated as sub-tasks)	✓	✗
One to One Teams chat migrated to Google Chat	✓	✓
Teams meetings from migrated calendars migrated to Google Meets	✓	✗
Teams channels migrated to Google Chat Spaces	✓ <sup>2</sup>	✓
Files migrated from M365 to Google Drive	✓ <sup>2</sup>	✓
Migrate OneNotes to Google Docs	✓ <sup>2</sup>	✓

## Why Choose BCC?

- **Proven Migration Expertise** – Trusted partner since more than 15 years for complex cloud migrations and digital transformations
- **Minimal Downtime** – Ensuring business continuity during migration.
- **Customizable & Scalable** – Tailored solutions to meet enterprise needs. Can utilize multiple servers in a Hub/Spoke design to provide scalability to the migration need.
